"Experiences and Results in the Course of 64 Clinical Resuscitations."

Budapest, Orvosi Hetilap, Vol 103, No 48, 2 Dec 62, page 2270-2272.

Abstract: [Authors' summary] The authors report their experience in 64 cases of clinical resuscitation. They discuss the precipitating factors of heart stoppage and classify death in three types. 47 cases were suitable for a resuscitation attempt. A definitive state of death was present in 17 cases in which resuscitation was considered the last refuge only. Of the 47 resuscitations, 49 percent showed final success. During the last four years the rate of successful resuscitations increased to 72 percent.

"Surgical Treatment of Renovascular Hypertension"

Budapest, Orvosi Intézet, Vol. 10, No. 10, October, 1968, pp. 10-16.

Abstract: [Authors] Hungarian and Soviet post-operative cases of surgical treatment in cases of renovascular hypertension are presented. Two operated cases are described. In one of these, renal arteriolization of the kidney was unsuccessful and nephrectomy was performed with a subsequent normalization of the hypertension. In the second case, the narrowing of the renal artery was corrected by endarterectomy and local plastic surgery. In addition to the normalization of blood pressure, a considerable improvement in renal function was also demonstrated in this case. 3 Western European, 22 Western references.

AUTHOR: Kudayev, M. B.

TITLE: The use of Lyapunov's functions for investigating the behavior of the trajectories of differential equation systems

PERIODICAL: Akademiya nauk SSSR. Doklady, v. 147, no. 6, 1962, 1285-1287

TEXT: The trajectories of a system of differential equations

$$\frac{dx_i}{dt} = x_i(x_1, \dots, x_n), \quad x_i(0, \dots, 0) = 0, \quad i = 1, \dots, n \quad (1)$$

are investigated. The functions $x_i(x)$ are assumed to be of the class $C^2(U(0))$ where $U(0)$ is a certain neighborhood of the origin. The position of the trajectories is derived from certain analytical properties of the functions x_i . Conversely, some analytical properties of x_i are deduced from given topological courses of the trajectories within certain domains. It is shown that the behavior of generalized Lyapunov's functions $V(x)$ is significant of the properties of hyperbolicity, ellipticity, and elliptico-hyperbolicity of the trajectories, those concepts being understood in the

TITLE:

An Investigation of the Initial Phases of a High-frequency
Discharge From a Point Electrode in Air at Atmospheric Pressure

PERIODICAL:

Izvestiya Akademii nauk SSSR. Seriya fizicheskaya, 1959,
Vol 23, Nr 8, pp 1004-1006 (USSR)

ABSTRACT:

The authors made attempts to check the assumption that phenomena of corona discharges occur in high-frequency discharges from points. The experimental arrangement consisting of a high-frequency generator, a high-voltage rectifier, and a discharge space is described and the experimental results are discussed. Experiments revealed that the initial voltage which is necessary to develop high-frequency discharge is below the initial voltage of a negative and positive corona at constant voltage. The change of the initial voltage for high-frequency discharge depends on the shape and size of the discharge point, on the discharge space, and on the frequency. The corresponding results of measurement are summarized by the diagram of figure 1, which represents the variation of the initial voltage as a function of frequency for five different discharge points. By

Card 1/2

An Investigation of the Initial Phases of a High-frequency Discharge From a
Point Electrode in Air at Atmospheric Pressure

SOV/48-23-8-15/25

further investigation the ignition voltage and the stopping potential of point discharge were determined on simultaneous application of direct voltage and high-frequency alternating voltage in different ratios. As an example, figure 2 shows the range in which the pulse of the streamers of a positive corona, appearing before the initiation of the latter, as well as of the high-frequency discharge from points arises at frequencies of 10 megacycles. Similar measurements were made for six further frequencies, showing that the formation of discharges and pulses of the "streamers" of a positive corona depends on the shape of the points, on the frequency, and on the intensity of the initial ionization. However, the authors point out that the zone in which discharge is observed has a natural voltage range in which the formation of "streamer" pulses may be found. There are 2 figures and 2 references, 1 of which is Soviet.

Orig Pub: Paliva, 1957, 37, No 6, 183 - 187.

Abstract: The effect of the petrographic composition, drying etc. on coal shrinkage was studied with an Odibert-Arnyu dilatometer, and it was shown that shrinkage could serve as an index of the transition of coal into plastic state. The rapid drop of the shrinkage curve at that occasion indicates a technologically uniform coal, which is the most suitable for coking.

Title : On the Problem of Evaluation of Coal on the Basis of Dilatometer Contraction.

Orig Pub: Paliva, 1957, 37, No 8, 269-271.

Abstract: Dilatometer contraction of coal which does not show dilatation can be considered an indicator of the degree of transfer of coal into a plastic condition. However, in this indicator there are two independent variables - quantity and quality of liquid in the plastic condition. A method is described for determining the quantity of liquid,

"Complex Method of Estimating the Underground Feeding of Rivers," B. I. Kudelin, Lab Hydrogeol Problems, Acad Sci USSR, 4 pp

"Camp Bend Acad Sci USSR" Vol LV, No 5

Hydrologic methods for estimating the underground feeding of rivers by their low normal water-level discharges or by the hydrograph inadequate. Underground feeding of rivers is complex phenomenon, composed of many elements of the run-off. Dynamics of the run-off at individual water-bearing strata drained by the river valley determined by the regime of the water-bearing horizons, by that of the river, and by the degree of hydraulic connection between the ground water flow and the river. Author discusses the question of the run-off of underground waters from water-bearing strata hydraulically connected with the river, one of the main sources of underground supply for most plain rivers. Submitted by T. P. Savarenko, 31 Jul 1946.
